ABSTRACTED-PUB-NO: DE 19716683C

BASIC-ABSTRACT:

In an apparatus (10) for separate encapsulation of several identical or different materials in closed cavities (8, 10) in a micro-mechanically produced structure, at least two of the cavities (8, 10) are separated by a membrane (5) which is formed by microsystem or thin film technology and which can be destroyed by an electric heater (7) of the apparatus in order to connect the cavities.

USE - E.g. for encapsulating sensitive materials, such as chemical indicator materials, catalysts and medicaments.

ADVANTAGE - The apparatus is miniaturised, can be mass produced and permits simple, contamination-free, rapid, event or time controlled, automatic mixing of two or more materials by explosive disintegration of a separating membrane.
